# The solution to regulatory audits

Does your business struggle to meet the ever-changing regulatory and audit requirements, such as Sarbanes-Oxley, Gramm-Leach-Biley, HIPAA and others, all requiring access certification?

Are you trying to create a repeatable and automated process to pass these audits -- but failing?

Manual access certification is error-prone, labor-intensive and insufficient to properly address today's regulatory and audit requirements. It also takes up valuable time that could otherwise be used to address business needs and growing your bottom line.

You need a truly repeatable, reproducible and automated solution. Reclaim your time with **Certify** by Pathways!

Leveraging the power and flexibility of the ServiceNow platform, **Certify** enables you to recertify your business applications, data and system resources, helping you pass audits with ease.

By leveraging your ServiceNow platform, **Certify** will automatically log all actions taken to keep a user's access in compliance with the regulations your organization needs to follow. With **Certify**, you'll have full visibility into the real-time status of all your organization's recertification efforts.

No more chasing down emails or other notes outside of the system: **Certify** will keep all relevant information inside of the system for easy access and full transparency of the end-to-end certification process.

Get in touch with one of our experts at Pathways and schedule a demo to learn more about the benefits that **Certify** can bring to your organization!

We listen.
We care.
We execute.
