

Pathways Consulting Group

QuickPath Enterprise is Pathways' method of setting up your organization's ServiceNow instance in four weeks, allowing for a straightforward development cycle of "crawl, walk, run."

QuickPath Enterprise aligns with ServiceNow best practices and was molded with lessons learned over hundreds of Pathways-led implementations.

BENEFITS OF QUICKPATH ENTERPRISE

By leveraging QuickPath Enterprise, your organization can have automated services up and running within four weeks, providing an almost immediate value showcase for your executive team.

With a predefined scope and a fixed timeline, QuickPath Enterprise ensures requirements are gathered and development begins early in the project in order to deliver visible value --

and results -- early and often. Pathways' technical team will work with your organization during each step of the project, guiding you in the kickoff phase through discovery, development, testing, training and production deployment.

At the end of the QuickPath Enterprise project, Pathways will provide training on your specific ServiceNow instance so your stakeholders, team members and end users will be well-equipped to work within the system on day one.

To learn more about QuickPath Enterprise and find out how Pathways can rapidly stand up your ServiceNow instance in just four weeks, send us an email: info@pathwayscg.com.
